

Job Title: .NET software developer

Location: 1030 Brussels.

Employer: Network Mining NV (www.networkmining.com)

Description

Network Mining is a Belgium based independent software vendor. The company offers software and services to telecommunications service providers. The offering is based on in-house developed solutions. The company was founded in 2004 and is owned by its management team.

To meet the our growing business demands, Network Mining is has opened a position for an additional software developer.

As a developer you will be involved in projects from the specification stage through to the final testing, delivery and ongoing support activities. Our software is dealing with large amounts of multiform data that represent telecom networks, hence you have to be fluent in SQL, and have the ability to make the link between complex data structures and real-life objects. Access to the application by end users is through web pages in ASP.NET with Visual Basic code, including javascript for interactive controls and SVG for graphical reports.

During project specification and throughout the implementation stage, there is frequent communication with the customer required, as for instance issues related to source data quality need to be clarified. We expect therefore good communication skills and a professional attitude.

We offer a flexible working environment, and we value the delivery of results over the hours spent at your desk. During training you will work in close cooperation with your coworkers and supervisor, but as you grow more independent in your activities we allow working from home part of the time, as we recognize that time spent commuting can sometimes better be used for other purposes.

Qualifications and past experience required

- Minimum 3-5 years experience in commercial software development.
- Experience with
 - .NET Framework, ASP.NET, Visual Basic, JavaScript, IIS, Css
 - MySQL
- Familiarity with Xml, Xsd. Knowledge of Wsdl, SOAP, is a plus
- Experience with Svg, Java, JMS, Corba is a plus
- Experience or familiarity with the following tools and processes:
 - Microsoft Visual Studio
 - Version control (Subversion, Tortoise SVN, or similar)
 - Unit testing
 - Continuous integration (CruiseControl, or similar)

- Knowledge of telecom network technologies (SDH, WDM, IP/MPLS, Carrier Ethernet ...) is a strong plus.
- Languages: English is the working language of the company and a good working knowledge of English is mandatory. Other languages, in particular Dutch or French are a plus.

To apply, please send your CV to Leo.Nederlof@networkmining.com No letter of motivation is required but please make sure that your CV addresses clearly your past experiences that matter to this position.
